

At Varco, microprocessor electronics means faster, safer, more efficient drilling.

Instant, accurate, constant information is vital to the drilling process.

It's why Varco's M/D TOTCO Instrumentation Division recently developed and introduced TOTAL Smart Drilling™, a new concept in rig information systems. With the TOTAL concept, drillers can closely monitor every critical drilling parameter with optimized graphical and numerical displays. Combining advanced sensors, the latest in microprocessor technology and experience-based application programs, TOTAL Smart Drilling™ lets drillers and other rig personnel easily spot troublesome trends, and conveniently archive and log drilling data.

Information is a productivity tool. And to anyone who says computers have no place on the rig floor, we say nonsense. If computers make drilling faster, safer and more efficient, they have a rightful place on the rigs of tomorrow.

And the rigs of today.

For your look at the rig equipment of tomorrow, call write or fax Varco for your own copy of this free brochure.

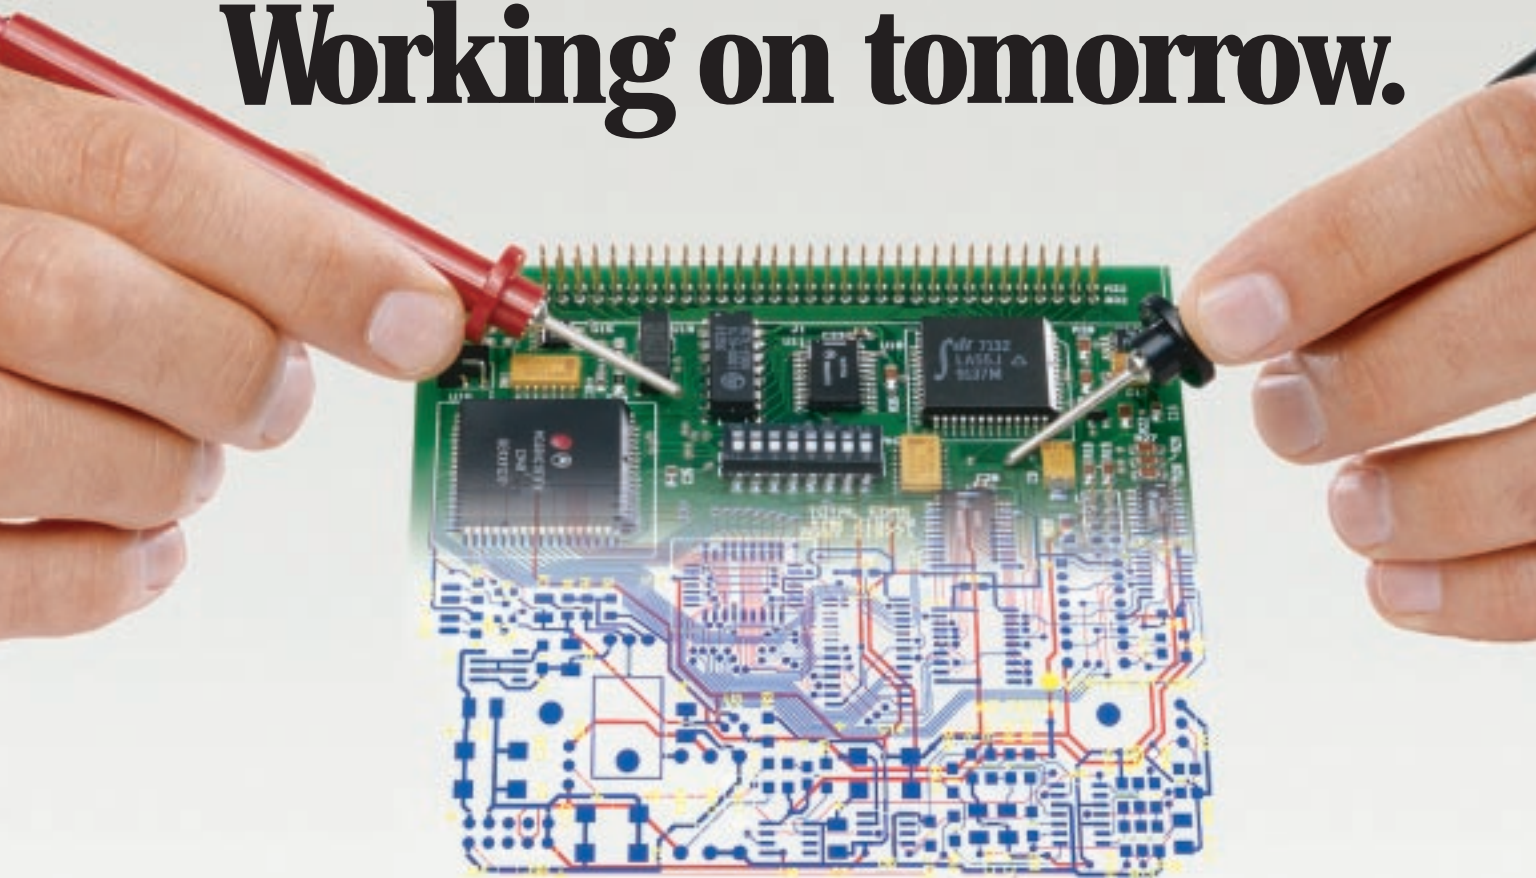

Advanced Varco equipment, systems and instrumentation – working across the U.S. and around the world.
